

Veterinarian Shortage Situation Nomination Form

To be completed by the chief State or Insular Area Animal Health Official or his/her designee

Veterinary Medicine Loan Repayment Program (VMLRP)

Nomination of Veterinarian Shortage Situations for the Veterinary Medicine Loan Repayment Program (VMLRP) Authorized Under the National Veterinary Medical Service Act (NVMSA)

Note: Please submit one separate nomination form for each position. See solicitation for number of nominations permitted for your state or insular area.

Location of Veterinary Shortage Area for this Nomination

Note: If this nomination is for a public practice position, please provide the location of the home office or the center of service area.

Location of Veterinary Shortage: Mineral, Rio Grande and Saquache Counties, Colorado
(e.g., County, State/Insular Area)

Center of Service Area or
 Location of Position: Monte Vista, CO 81321
(e.g., Address or Cross Street, Town/City, and Zip Code)

Type of Veterinary Practice Area/Discipline/Specialty

Type I Shortage: Private Practice
 Food Animal Medicine (at least 80 percent time)
 Please select **one or more** specialties requested for this position:

- Beef Cattle
- Dairy Cattle
- Swine
- Poultry
- Small Ruminant
- Other _____

Type II Shortage: Private Practice – Rural Area
 Food Animal Medicine (at least 30 percent time)
 Please select **one or more** specialties requested for this position:

- Beef Cattle
- Dairy Cattle
- Swine
- Poultry
- Small Ruminant
- Other : _____

Type III Shortage: Public Practice (at least 49 percent time*)
 Employer: _____ Position Title: _____
 Please select **one or more** specialty/disciplinary areas.

- Food Safety
- Public Health
- Epidemiology
- Other: _____

Please describe the objectives of a veterinarian meeting this shortage situation as well as being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

The main objective of a veterinarian in this rural area would be to alleviate the veterinary practitioner shortage that exists. They would work to sustain livestock industries and promote animal health in three southwestern Colorado counties; Mineral, Rio Grande and Saquache. These counties have more than 45,000 food animals including a significant concentration of cow/calf operations and sheep flocks in an area that is almost 5000 sq. miles wide. Meeting this objective will improve food safety, animal health and public health.

The second objective would be to increase disease surveillance in this area. These counties make up the southwestern most point of Colorado. Distance, terrain and limited government personnel resources all diminish the ability to monitor both state and national diseases. Having an additional veterinarian in these areas increases the ability for surveillance and helps the state identify and mitigate disease outbreaks sooner.

The third objective would be to recognize foreign animal disease outbreaks in the area. This position will participate as a member of the Colorado Veterinary Response team. An additional veterinarian helps to maintain resiliency of Colorado livestock and the nation's food supply in the event of an outbreak.

Please describe the activities of a veterinarian meeting this shortage situation and being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

The veterinary activities needed by the livestock producers in this three county area include:

- Provision of emergency veterinary services; for example livestock health care needs resulting from acute illness, trauma, dystocia or obstetrical difficulties
- Provision of routine veterinary services; for example vaccination, castration or dehorning
- Consultation in health care programs and nutrition
- Disease diagnostics for routine illness
- Utilizing official animal identification for good traceability
- Disease surveillance and diagnostics for state and federal program diseases and for foreign animal diseases
- Completion of Certificates of Veterinary Inspection that meets all animal health testing requirements needed in order to ship livestock for healthier interstate commerce
- Provision of reproduction management consultation and services
- Participates as a member of the Colorado Veterinary Response team to help protect the nation's food supply.

Please describe any past efforts to recruit and retain a veterinarian in the shortage situation identified above (limit your response to 100 words or less).

Veterinarians in these areas have utilized the national Veterinary Career Network and Colorado Veterinary Medical Association to entice veterinarians to this underserved area. Despite this, graduate veterinarians have seen little incentive to practice within this area. This area faces additional shortage with ½ of the established veterinarians approaching retirement. There is a great desire by the local community to add additional veterinary services before these veterinarians retire. By offering monetary incentive and debt relief through the VMLRP, local practices will be able to provide additional incentives to veterinarians.

Please describe the risk of this veterinarian position not being secured or retained. Include the risk(s) to the production of a safe and wholesome food supply and to animal, human, and environmental health not only in the community but in the region, state/insular area, nation, and/or international community (limit your response to 250 words or less).

The risks associated with a lack of available veterinary services within a reasonable proximity of a producer's location in these areas could include:

- A greater prevalence of disease, which increases reproductive losses, increases the morbidity and mortality of food animals and leads to monetary loss for the producer and the community.
- The potential for the establishment and spread of a foreign animal disease due to the lack of timely surveillance and participation in Colorado emergency management activities
- The potential for the establishment and spread of a program or zoonotic disease due to the lack of timely surveillance and diagnostics
- A lack of the facilitation of interstate movement of animals through the issuance of a Certificate of Veterinary Inspection or commuter agreements
- Adulteration of food products due to the producer's lack of knowledge on the proper use of pharmaceuticals and veterinary biologic products
- Increased production costs resulting from a lack of consultation on nutrition, proper herd management and routine disease control
- With little veterinary presence in the area the detection of FAD or lesser disease outbreak may increase the spread of disease especially into neighboring states Arizona, New Mexico and Utah.

Please indicate whether you consider this situation/position a candidate for a "service in emergency" agreement (limit your response to 100 words or less). Please see solicitations for additional information regarding the obligation of participants who enter into the "Service in Emergency" agreement.

Authorized State or Insular Area Animal Health Official or designee:

Name: Keith A. Roehr, DVM

Title: Colorado State Veterinarian

Organization: Colorado Department of Agriculture

Email: Keith.roehr@ag.state.co.us

Telephone Number: 303.239.4166
(Area code required)

Public reporting for OMB control number 0524-0046 is estimated to average two hours, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a current valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to NIFA, OEP, 800 9th St. SW, Washington, DC 20024, Attention Policy Section.
