

Foods Dictionary How to Create in ERS

A copy of the foods dictionary can be created using the ERS software. From the Main Switchboard, select Nutrition, then Food Dictionary and then choose how you want the data sorted -- by Food ID or by Food Name. You can then either Preview the document, Print it, or send the Output to a RTF file for Word Processors. The latter choice will allow you to edit the Foods Dictionary and add in cross-referencing descriptions for selected foods, such as frankfurter and hot dog.
